

Modify post to incl. bookmark

A post always has a relation to an article (or other content type). If a person has bookmarked an article, the column "bookmarks" in database **person** would contain an ObjectID to that row.

Task

Append true if the post was bookmarked by the user.

Pseudo code

The ObjectID of the user is present in {guid: req.query.guid}

```
./get_post.js
```

List all posts for all users.

```
./get_library.js
```

List all bookmarked items for a specific user

Data dumps

```
./db/library.csv
```

```
./db/post.csv
```

```
./db/person.csv
```

Modified version of get_post should be sent to: emanuel@alinebetter.com

In case of doubt, just let me know.

Good luck
